

# Big Data Security and Privacy

Prof. Jigar Pandya • Jul 16 (Edited Jul 16)

One of the risk involved with Big Data and Analytics is security and privacy. On the name of providing better customer experience, there is a request to open door. i.e. accepting cookies policy, etc. The travel of data from continent to another to achieve super availability but legals involved in utilising of the same across borders are always debatable.

The information technology related acts and bills are becoming more and more complex to define.

Important technological terms:

Data Principal

Data Fiduciaries

Data Protection Authorities (DPA)

Interested students may explore Personal Data Protection Bill

<https://meity.gov.in/data-protection-framework>

MeitY, Government of India.
