Learning from implementation

⋮

Prof. Jigar Pandya • Mar 2

Make sure to provide requirement id from srs into implementation chapter wherever you are describing the implementation logic with snap and code.

You can also create implementation chapter either based on priority and dependencies of important features or as per order of requirements from SRS.

Know that implementation chapter is not for providing webpages screenshots. NO. Actually a separate chapter named layouts/screenshots towards the end of project report where you will dump all a-z snaps. In implementation chapter try to put snap of pages as relevant and small as possible.

Cookies acceptance like pop up about what are you storing and what not. privacy notice is a good way of making your site trustworthy and lawfully safer.

Printing/Attaching source code completely is optional. You may share git repo snaps/reports to talk about your code in additional "Code" chapter.

Go an write comments inline each and every source code file.

Till when possible use more and more open source softwares/libraries/plugin,etc. If interested develop things of your own and contribute to community.

Document all of your findings. Used or not used for a reason.
