

- ☐ Do I use an attention-grabbing opening?
- ☐ Do I start with broad ideas and later talk about specific details?
- ☐ Do I speak in short sentences?
- ☐ Do I pause for five seconds after showing a data visualization?
- ☐ Do I pause intentionally at certain points?
- ☐ Do I keep the pitch of my sentences level?
- ☐ Do I stand still and move with purpose?
- ☐ Do I have good posture?
- ☐ Do I look at my audience (or camera) while speaking?
- ☐ Do I keep my message concise?
- ☐ Do I end by explaining to my audience why the data analysis matters?

You can also add checklist items that help you refine your slide deck:

- ☐ Do I include a good title and subtitle that describes what I'm about to present?
- ☐ Do I include the date of my presentation or the date when my slideshow was last updated?
- ☐ Does my font size let the audience easily read my slides?
- ☐ Do I showcase what business metrics I used?
- ☐ Do I include effective visuals (like charts and graphs)?

[Evaluate your presentation](#)

Before the presentation

- ☐ Assemble and prepare your questions.
- ☐ Discuss your presentation with your manager, other analysts, or other friendly contacts in your organization.
- ☐ Ask a manager or other analysts what sort of questions were normally asked by your specific audience in the past.
- ☐ Seek comments, feedback, and questions on the deck or the document of your analysis.
- ☐ At least 24 hours ahead of the presentation, try and brainstorm tricky questions or unclear parts you may come across- this helps avoid surprises.
- ☐ It never hurts to practice what you will be presenting, to account for any missing information or simply to calm your nerves.

During the presentation

- ☐ Be prepared to respond to the things that you find and effectively and accurately explain your findings.
- ☐ Address potential questions that may come up.
- ☐ Avoid having a single question derail a presentation and propose following-up offline.
- ☐ Put supplementary visualizations and content in the appendix to help answer questions.
